

Disaster Recovery as a Service (DRaaS)

Ensure Business Continuity with Fully Managed Disaster Recovery

A Fully Managed Disaster Recovery Solution That Restores Critical Systems Fast & Reduces Risk

The Challenge

Unplanned downtime is not just an IT disruption. It can impact revenue, productivity, customer trust, and brand reputation, especially when critical applications and systems are unavailable for extended periods. In today's environment, cyber threats, infrastructure vulnerabilities, and growing data complexity increase the likelihood and impact of unexpected outages.

Traditional backup alone is no longer enough to support real business continuity. Organizations need a proactive recovery strategy and a fully managed solution that enables fast restoration, minimizes downtime, and helps maintain compliance when disruptions occur, whether caused by cyber incidents, system failures, or natural disasters.

DRaaS at a Glance

Disaster Recovery as a Service (DRaaS) from Xigent delivers a fully managed, cloud-based solution designed to keep critical applications, systems, and data accessible during disruptions. With continuous replication, automated failover, and expert oversight, DRaaS helps organizations quickly restore operations and maintain continuity during unexpected events.

Built around proven business continuity and disaster recovery processes, DRaaS is scalable to meet evolving needs while reducing the day-to-day burden on internal teams. Regular testing validates readiness, and predictable monthly costs make it easier to plan and protect the business without building and maintaining a separate recovery environment.

Service Highlights

Disaster Recovery as a Service (DRaaS)

- ▶ Fully managed configuration & administration
- ▶ 24/7 Expert support
- ▶ Bi-Annual, no-impact testing
- ▶ Predictable monthly cost
- ▶ Proven business continuity & DR processes
- ▶ Rapid recovery & automated failover
- ▶ Scalable to meet evolving business needs

Cost-Efficient, Scalable Disaster Recovery for Business Continuity

Scalable & Flexible

Scale resources as business & data requirements change

Improve Recovery Time

Restore critical systems quickly with automated failover & replication

Cost Efficient

Eliminate upfront infrastructure costs with predictable pricing

Reduce DR Management

Offload disaster recovery management to Xigent's experts

Disaster Recovery That Protects the Business

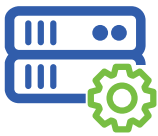

DRaaS helps organizations minimize downtime and reduce the operational and financial impact of disruptions. With automated recovery processes and proven failover capabilities, critical systems can be restored within minutes in many scenarios, helping teams maintain productivity and continuity when it matters most.

By shifting disaster recovery management to Xigent, internal IT teams reduce complexity and gain reliable oversight from experts who manage configuration, administration, and support. The result is a more resilient recovery posture, improved preparedness through regular testing, and a practical approach to meeting expectations for continuity, security, and compliance.
