

# Xigent's SecurScan

## Protect Your Business with Proactive Vulnerability Scanning

Vulnerability scanning is a critical component of any company's cybersecurity program. It involves the automated process of identifying, assessing, and prioritizing security vulnerabilities in an organization's network, systems, and applications. As one of the most impactful and least costly elements of a security program, vulnerability scanning offers significant protection without requiring a major financial investment. As cyber threats become increasingly sophisticated, regular vulnerability scanning helps to proactively detect weaknesses that could be exploited by malicious actors. By identifying these vulnerabilities before they are exploited, companies can patch or mitigate them, significantly reducing the risk of data breaches, financial loss, and damage to their reputation.

Investing in vulnerability scanning is not just about safeguarding data; it is about maintaining trust and ensuring business continuity. A single security breach can have devastating consequences, including regulatory penalties, loss of customer trust, and operational disruptions. Regular vulnerability scanning enables companies to stay ahead of potential threats, ensuring that their security measures evolve in response to new vulnerabilities. This proactive approach not only protects the company's assets but also enhances its credibility in the eyes of customers, partners, and stakeholders who expect robust security practices.

## SecurScan at a Glance

Xigent's SecurScan Vulnerability Scanning offers a comprehensive, scalable, and easy-to-use solution for managing and mitigating security vulnerabilities across your organization. It provides automated scanning, real-time monitoring, detailed reporting, and actionable remediation guidance to help you maintain a strong security posture and ensure compliance with regulatory standards.

## Program Highlights

- ▶ Automates vulnerability scanning on a weekly or monthly basis
- ▶ Identifies and addresses vulnerabilities early to significantly reduce the risk of security breaches
- ▶ Simplifies regulatory compliance with automated reporting & policy enforcement
- ▶ Generates reports with clear, actionable insights, helping prioritize vulnerabilities
- ▶ Frees up IT staff from routine security tasks, allowing them to focus on more critical & strategic initiatives
- ▶ Designed for small businesses and large enterprises, SecurScan offers a scalable and user-friendly solution

## Benefits of SecurScan

### Proactive Security

Xigent's SecurScan identifies vulnerabilities early, reducing the risk of breaches and safeguarding sensitive data and systems. This proactive approach minimizes disruptions and protects your reputation, ensuring IT continuity so your team can focus on strategic goals without constant security worries.

### Improved Efficiency

SecurScan automates scanning and reporting, allowing IT staff to handle routine checks without manual effort. This frees up time and resources, enabling focus on critical tasks and strategic initiatives.

### Actionable Insights

SecurScan's vulnerability scanning provides clear insights to help prioritize and address vulnerabilities effectively. It identifies and categorizes issues, allowing your IT team to understand their impact and urgency, enabling a focused remediation approach.

### Leverage SecurScan's Security Improvement Methodology

SecurScan is an automated cybersecurity process that helps maximize risk reduction by detecting potential security issues. Xigent's automated tool will identify and assess weaknesses in systems, networks, and applications to improve overall security.

By following our SecurScan framework, organizations can identify, prioritize, and address vulnerabilities, enhancing their security posture and mitigating potential threats.

# SecurScan & SecurScan+

## Vulnerability Scanning to Meet Your Security Needs

Xigent offers two tailored options for vulnerability scanning: SecurScan and SecurScan+. Both options are designed to help your organization effectively identify, assess, and address security vulnerabilities based on your specific business and security needs.

### SecurScan

#### Frequent & Advanced Automated Scans

- ▶ Weekly or monthly vulnerability scans of external IP addresses, websites, and internal networks
- ▶ Advanced scans, including authenticated scans, application security assessments, and configuration audits
- ▶ Comprehensive Coverage: Scans networks, servers, endpoints, applications, and databases for vulnerabilities

#### Scanning Support

- ▶ Access to support via email for report clarification and basic questions
- ▶ The service includes one 1-hour monthly meeting with a security expert to review scan findings, receive assistance with prioritization, and gain expert insights on the results

#### Comprehensive Reporting

- ▶ Simple, easy-to-read reports delivered after each scan
- ▶ Highlighting critical vulnerabilities with basic remediation steps

#### Customer Portal Access

- ▶ Access to an online portal for viewing scan results and historical reports
- ▶ Advanced online portal features, including vulnerability trend analysis, dashboard view, and customizable reporting

#### Email Alerts

- ▶ Automated email notifications for critical vulnerabilities found during scans

### SecurScan+

SecurScan+ is an add-on service offered by Xigent that provides clients with expert remediation support for addressing security vulnerabilities. Sold in increments of 4 hours per month, this flexible service ensures that businesses have the necessary assistance to effectively resolve vulnerabilities uncovered during security scans or audits.

With SecurScan+, clients can rely on Xigent’s skilled professionals to help prioritize and implement critical fixes, ensuring their systems remain secure and compliant. This tailored solution allows organizations to stay proactive in their cybersecurity efforts by providing timely remediation support whenever new vulnerabilities are detected.

#### Remediation Support

- ▶ Access to expert support for remediation assistance, including phone support and remote sessions
- ▶ Step-by-step guidance for fixing identified vulnerabilities

#### Compliance & Audit Support

- ▶ Assistance with compliance requirements and audit preparation related to vulnerability management

#### Regular Reviews & Consultations

- ▶ Quarterly review meetings with a dedicated security consultant to discuss the security posture, review scan results, and plan future security activities
