Xigent's SecurPath

Build a Comprehensive Security Program Capability for Your Organization

Your business data and brand reputation are valuable. The costs of downtime, corrupt or missing data, lost productivity, lost revenue, and damaged brand reputation can be devastating to unprepared organizations. These risks have compounded in recent years as the threat landscape has expanded. As a result, the need for improved security and prevention programs have grown.

Building an effective security program capability is challenging. It starts with staffing the myriad of skills/roles required to design, build, and manage a quality security program. These resources are scarce, expensive, and are often only needed on a fractional basis. The second challenge is building and executing a process to drive security improvement and remain vigilant over time as the threat landscape and business changes. Lastly, the supporting security technology infrastructure and non-technical program components must be designed and implemented in a way to maximize outcomes while minimizing cost. Bringing this puzzle together in a coordinated manner is the challenge. This is where Xigent's SecurPath comes in. together in a coordinated manner is the challenge. This is where Xigent's SecurPath comes in.

SecurPath at a Glance

SecurPath provides comprehensive security program leadership and management to build, manage, and maintain your security program capability. Included in SecurPath is expert fractional resources (vCISO), improvement methodology, security program component resources including technical infrastructure skills, and supporting technology—all focused on achieving your security goals.

Program Highlights

► Identify goals and objectives of your security program

► Gain an understanding of your current security level

► Determine gaps in existing security capabilities

► Create a roadmap & plan to address identified issues

► Measurable program results

► Provide direction to technical resources who carry out the plan

► Evolve your program over time

A Value-Driven Program for IT Security Improvement

SecurPath Offers more than a vCISO Contract

While building in-house capabilities or contracting vCISO services may be more familiar to you, there are unique benefits to the SecurPath approach.

Access a Full Team of Experts

Building and managing an effective security program requires a team of skilled resources. Roles include CISO, Security Manager, Security Architect, Business Analyst, Security Consultant, Security Engineer, Systems Administrator, and Project Manager. Typically, these resources are utilized on a fractional or part-time basis. No single individual (or even two or three) has the breadth of skills required. It takes a team. With Xigent's SecurPath, you get the skilled resources you need when you need it. This starts with the assigned CISO leading the security program initiative. The CISO brings in other resources throughout the process to perform their specialized functions. This leads to the best outcomes in the most cost-effective manner.

Leverage SecurPath's Security Improvement Methodology

SecurPath includes a structured process organizing the range of activities that encompass your cybersecurity program. Activities include establishing your security goal based on the risks of the business, assessing current security capabilities against the goal and industry standards, developing a roadmap and plan to address the gaps, implementing remediation actions to the plan, as well as maintaining the improved security capabilities and evolving the program over time as needed. The SecurPath methodology brings these activities together in a coordinated approach to delivery and maintain desired security outcomes.

Address the Full Spectrum of Security Program Components

A security program is only as strong as its weakest link. Xigent's SecurPath approach identifies all the issues and areas needing improvement. The list of issues is extensive and includes items like policy, employee awareness, application security, as well as the technology infrastructure. The annual security assessment will identify issues and gaps. The roadmap and near-term action plan will focus on remediating the highest priority identified gaps. A very important component of a security program is the technical infrastructure needed to ensure applications, systems, and data is protected. SecurPath will identify security issues within the technical infrastructure and provide the expertise needed to ensure it is functioning properly.
