Xigent's Backup Repository for Veeam Cloud Connect
Immutable and Air-Gapped for Full Data Protection

Xigent's Backup Repository for Veeam Cloud Connect enables you to recover your backup data from internal threats and external cybersecurity threats. The service aids your long-term regulatory data retention requirements and effectively eliminates the need for physical tapes to achieve today's widely encouraged airgap and immutable requirements.

Backup Repository for Veeam Cloud Connect requires zero additional tools to learn and is fully integrated with Veeam's industry-leading backup and replication solutions. Existing backup and replication jobs are simply modified to send, upon completion, a "copy" of the job to Xigent's Backup Repository. That off-site, saved "copy" is now both immutable and air-gapped from your primary backup.

Veeam's industry-leading backup and replication solutions can reduce the complexities of backup management while protecting cloud, virtual and physical workloads for all major platforms and enterprise applications. When combined with Xigent's Backup Repository for Veeam Cloud Connect, you can effectively mitigate the risk of data loss, and ransomware, and achieve compliance with even the most stringent data safeguarding standards.

Is Backup Repository for Veeam Cloud Connect In Your Data Protection Strategy?
The Importance of 3-2-1 Backups

Are you meeting industry best practice for backups known as the "3-2-1 rule" for your data backups? 3-2-1 means 3 copies of your data, stored on 2 different media types, with 1 copy offsite from your production data. Following this important rule is often both expensive and time-consuming for your business. Additionally, cyber insurers are now insisting on an updated 3-2-1-(1) rule, which dictates that the (1) off-site copy must be immutably stored and air-gapped. The modern data management capability of Veeam Cloud Connect and Xigent's Repository Service allows you to easily comply with new data safeguarding requirements while eliminating the reliance on tape backups and legacy solutions.

Are Your Backups Protected From Ransomware?

Ransomware threats have evolved and are now targeting your backups prior to launching an attack. In many cases, your backups are your last resource to recover from these types of malicious attacks or insider threats. Protect your business-critical data and make your backups bulletproof with Xigent's Backup Repository for Veeam Cloud Connect solution.

Our engineers will help you leverage immutable and air-gapped storage, protecting your data from the worst of threats. Modernize your data management and simplify your data protection with Xigent's Backup Repository for Veeam Cloud Connect. Recover your data from an offsite copy or restore single files with file-level recovery. Whatever your business needs are, we ensure you are back online following data loss events including malicious or accidental deletions, file corruption, and, most importantly cybercrime.

What are the Benefits of Xigent's Backup Repository for Veeam Cloud Connect?

Xigent's Backup Repository for Veeam Cloud Connect was designed to support businesses in the protection of critical data from internal and external threats and will aid in modernizing your backup strategy.

Backup Repository for Veeam Cloud Connect provides integrated, secure, and cost-effective protection and long-term retention for both your on-premise and cloud "backup" data. This ensures you have a good working copy of all of your data following any data loss event.

Benefits

Fully Managed Offsite Storage Repository

▶ 24x7 monitoring of repository availability

▶ Monthly reporting of usage

▶ Provides an efficient integrated backup copy solution

Secure

▶ Unique tenant credential separated from your domain and control

▶ Secure-environment is compliant with strict industry requirements

▶ Air-gap compliant

▶ Immutable storage

▶ Encryption both at-rest and in-flight

Simple Restore

▶ Leverage tools you already know

▶ File-level recovery

Scalable Architecture

▶ Predictable cost-pay as your storage needs grow in quantities of 1 TB

▶ Dedicated throughput to support your backup workloads

▶ Supports multi-site environments
